

What MyClassBoard does not have

Checked against the MCB screen list exported from a school's login on 7 October 2026. Each line is something XULO does and MCB does not. The last column says what the school gains.

Money

Reminders that go out on their own Fee reminders by WhatsApp and SMS on a schedule the office sets once	Fees come in by the due date without a clerk ringing families
Payroll in the same product Monthly payroll, payslips, PF and ESI groups, loss of pay from the register	No HR Plus module to buy; no re-typing
Books of account Chart of accounts, daybook, cashbook, ledger, trial balance, year-end close	The accountant works in one system
Tax filing sheet GST receipts, the taxation and audit sheet with the school's own registrations	Ready for the auditor without a second tool
Outstanding as at any month Billed minus paid up to a month end, class by class, unchanged by later payments	The figure an auditor asks for, in one click

Parents

Class Status stories Photo and video stories from a class, a school gallery families can answer	Parents see the day; fewer calls to the office
Grievances with an owner and a deadline A complaint goes to the right person and is tracked to an answer	The principal's phone rings less
Leave decided in the app A parent applies; the class teacher sees it in the register the same day	No slips of paper, no missed absences
Bus proximity alerts The parent sets a radius; the phone buzzes when the bus is near	Children are not left waiting at the stop

Running the school

Works with no signal Attendance, diary and homework on a phone offline; sent when the network returns	Teaching does not stop when the wifi does
Twenty roles, each with its own home Principal, HOD, exam controller, warden, nurse, counsellor, discipline, driver, trustee, IT admin, seller	Every person opens to their own work, not a menu of 300 screens
Hostel Rooms, outpasses, mess, night study, visitors, laundry	Boarding schools run on the same product
Clinic, counselling, discipline Visits and medication, family conversations, conduct notes, incident log	Records that today live in notebooks
Stores and canteen Stock and movements, store catalogue, canteen terminal	Money taken on campus reaches the books
Exams with controls Question paper approval, mark moderation, hall tickets and seating	No leaked papers, no disputed marks
LMS for young children Subjects and modules, quizzes, video that does not stream on locked days	Learning at home without a second app

The board and the government

UDISE+, APAAR, DigiLocker, RTE

Data kept as the year goes; certificates issued as verifiable documents; the RTE lottery imported

No scramble at return time

Staff service book and training hours

Postings, increments, qualifications, and the hours each board requires

Ready when the inspector asks

Support and ownership

Help inside the product

Troubleshooters, Quick Assist screen sharing with a six-digit code, known issues with workarounds

A small school needs no IT person

The school's own brand, included

Colour, logo and name on every screen and print; the school's own app on request

No branded-app surcharge

Many schools from one desk

A seller console with plans, entitlements, usage and support for every school

A group of schools is run as a group

What MCB has that XULO does not yet: a staff task manager was the biggest and is now built; a Lexile reading scale (XULO keeps any reading level the school uses); route planning on a map; a staff handbook screen. The full screen-by-screen list is in [MCB_vs_XULO_comparison.pdf](#).
