Seven reasons a school chooses XULO over MyClassBoard

Written for the correspondent, the principal and the accountant who decide. Each point says what the school gains, how XULO does it, and what MyClassBoard offers today, so the comparison can be checked against both products.

Sources: the MyClassBoard screen list and price list exported from a school's login on 7 October 2026, the myclassboard.com product pages, and the XULO build of 8 October 2026 (408 catalogued features, 1,724 server routes, 538 tables, 430 server tests and 701 app tests passing).

The comparison in four numbers

402
MyClassBoard screens in the exported catalogue

368
of them XULO does the same job

12
covered by a general tool rather than a dedicated screen

22
XULO leaves out, mostly fixed reports and MCB-only tools

The other direction matters more. XULO runs hostel, payroll, books of account, clinic, counselling, discipline, stores, canteen, LMS, class stories, statutory returns and a seller console inside one product. MyClassBoard sells hostel, inventory, LMS and HR Plus as separate priced modules, and does not list the rest.

1. Fees arrive on time without a clerk chasing

Fee reminders go out by WhatsApp and SMS on a schedule the office sets once. Late fines apply themselves with the grace days the school chose. Post-dated cheques sit in a register with clear and bounce, and a bounce fine. Parents pay from the app and the receipt is issued by itself. Collected fees is the number a correspondent watches; this is where it moves.

MyClassBoard today: Invoices, receipts and online payments, with reminders sent by hand and reports read afterwards.

2. The accountant works in one system

Every receipt posts to double-entry books: chart of accounts, daybook, cashbook, ledger, trial balance and year-end close, plus GST receipts and the taxation sheet with the school's own registrations. Outstanding as at any month end, class by class, in one click. A Tally connector for the auditor who insists.

MyClassBoard today: About 150 fixed finance reports and a Tally export; the books themselves live in Tally.

3. Payroll and HR in the same product, not a module to buy

Monthly payroll with PF, ESI, professional tax and Form 16, loss of pay taken from the staff register, payslips, service book, onboarding with KYC, exit clearance, appraisal, training hours for the board. The run refuses to pay a month where attendance was never marked unless the office says so.

MyClassBoard today: HR Plus, priced separately and quoted on request.

4. Every person opens to their own work

Twenty named roles, each with its own home: principal, HOD, exam controller, class teacher, accountant, admissions desk, warden, nurse, counsellor, discipline, driver, trustee, IT admin and the seller. A teacher sees her register and diary; a trustee sees where the money goes. Nobody faces a menu of 300 screens.

MyClassBoard today: Admin, branch staff, teacher, parent and student, with menus per user type.

5. Parents see the day, so the office phone rings less

Class Status photo and video stories with a family gallery. Absence told the moment the register is marked. Leave applied in the app and visible to the class teacher the same day. A bus proximity alert when the bus is within the radius the parent set. Report cards released only after sign-off, and locked once released. All of it phone-first, in the school's own name and colours, with no branded-app surcharge.

MyClassBoard today: The Smart School app with diary, homework, fees and PTM booking; a branded app is a paid service.

6. It keeps working with no signal

Attendance, the diary and homework work on a phone offline and send themselves when the network returns. The register will not accept a child who is not in the section, a date that has not come, or a day already approved as leave, so what reaches the office is right first time.

MyClassBoard today: Daily, biometric, RFID and period-wise attendance, online.

7. Returns, boards and the government, without the scramble

UDISE+, APAAR and RTE data kept as the year goes, with a Returns readiness screen that counts what is missing today and names the screen it is filled on. Question paper approval, mark moderation, hall tickets and seating. Staff service book and training hours ready when the inspector asks.

MyClassBoard today: Admission and certificate screens; returns assembled from reports at the time they are due.

Side by side

Area	MyClassBoard	XULO	Edge
Scope	SIS, HR, Finance, Admissions, Transport, Certificates, Library, Organisation; hostel, inventory, LMS and HR Plus sold separately	The same eight, plus hostel, payroll, books of account, clinic, counselling, discipline, stores, canteen, LMS, class stories, statutory returns and a seller console, in one product	XULO
Roles	Admin, branch staff, teacher, parent, student	Twenty named roles, each with its own home screen	XULO
Fee counter and receipts	Invoice or challan, receipts, online payments, credit-note wallet	Take fee payment, A4 receipt in the school's design, student wallets, online portal; fees post to the books automatically	Even
Finance reports	About 150 fixed reports accountants know by name	Dashboard, day sheet, dues, ledger, GST receipts, books and tax reports, fixed reports for the auditor, a Custom Report Builder; fewer fixed sheets	MCB
Payroll and accounts	HR Plus as a separate module; Tally export	Monthly payroll, PF and ESI, payslips, taxation filing, chart of accounts, daybook, cashbook, Tally connector	XULO
Admissions	Enquiries, counsellors, LeadSquared link, many dashboards	Enquiries, lead assignment, follow-up calls, enquiry links, form builder, RTE quota, waitlist; fewer dashboards	Even
Transport	Routes, trips, VTS vendor link, zones, 13 reports	Vehicles, routes and stops, allocation, scans, live tracking, geofence alerts, fuel and maintenance, AIS-140, parent bus radius alert	Even
Attendance	Daily, biometric, RFID, period-wise, face recognition	Class and whole-school, correction workflow, absentee follow-up, biometric sync, offline capture; approved leave shows in the register	Even
Exams	Marks and report cards	Exams and papers, hall tickets and seating, question paper approval, mark moderation, CCE, question bank, report cards with sign-off and release	XULO
Parent and student app	Smart School app: diary, PTM booking, homework, fees	Phone-first portals, native Android and iOS shells, class stories, homework diary, planner, bus alerts, offline	XULO
Messaging	Published rates: SMS 0.1888, WhatsApp 0.85 incl. GST, voice 0.708 per credit	Channel ladder (in-app, push, WhatsApp, SMS), delivery receipts, quiet hours, evening digest; credits sold by the seller	MCB on price, XULO on design
Maturity	Live at many schools for years	Built August to October 2026; first schools to follow	MCB

What MyClassBoard does not have

Checked against the MCB screen list. Each line is something XULO does and MCB does not, and what the school gains by it.

Area	XULO has	The school gains
Money	Fee reminders by WhatsApp and SMS on a schedule set once	Fees come in by the due date without a clerk ringing families
Money	Monthly payroll, payslips, PF and ESI, loss of pay from the register	No HR Plus module to buy; no re-typing
Money	Chart of accounts, daybook, cashbook, ledger, trial balance, year-end close	The accountant works in one system
Money	GST receipts and the taxation and audit sheet with the school's registrations	Ready for the auditor without a second tool
Money	Outstanding as at any month end, class by class	The figure an auditor asks for, in one click
Parents	Class Status photo and video stories, a school gallery	Parents see the day; fewer calls to the office
Parents	Grievances with an owner and a deadline	A complaint reaches the right person and is tracked to an answer
Parents	Leave decided in the app, visible to the class teacher the same day	No slips of paper, no missed absences
Parents	Bus proximity alert at a radius the parent sets	Children are not left waiting at the stop
Running the school	Attendance, diary and homework work offline on a phone	Teaching does not stop when the wifi does
Running the school	Twenty roles, each with its own home	Every person opens to their own work
Running the school	Hostel: rooms, outpasses, mess, night study, visitors, laundry	Boarding schools run on the same product
Running the school	Clinic, counselling and discipline desks	Records that today live in notebooks
Running the school	Stores and canteen with student wallets	Money taken on campus reaches the books
Running the school	Question paper approval, mark moderation, hall tickets and seating	No leaked papers, no disputed marks
Running the school	LMS with modules, quizzes and video that does not stream on locked days	Learning at home without a second app
Board and government	UDISE+, APAAR, DigiLocker, RTE handling and a Returns readiness screen	No scramble at return time
Board and government	Staff service book and training hours	Ready when the inspector asks
Support and ownership	Help inside the product: troubleshooters, Quick Assist screen sharing, known issues	A small school needs no IT person
Support and ownership	The school's own colour, logo and name on every screen and print	No branded-app surcharge
Support and ownership	A seller console with plans, entitlements, usage and support for every school	A group of schools is run as a group

Where MyClassBoard is ahead, and what XULO offers instead

MyClassBoard	XULO
Years in daily use at many schools, with a support organisation and hardware partners for biometric and GPS.	Built August to October 2026 and not yet live at a school. The first school gets the vendor's direct attention for a term, and a Move from MyClassBoard import that maps MCB's own column names, with a dry run that names every row before anything is written.
About 150 fixed finance reports that accountants and auditors already know by name.	The seven sheets accountants ask for by name (cheque deposit, bank submission, outstanding as at month, fee plan details, consolidated month-wise, ECS and parent bank details, card swipe charges), thirty-one more as exports, and a Custom Report Builder for the rest.
A published message-credit price list.	The same per-message model in the seller console. The per-student figure and per-message rates are published with the first contract; there are no module quotes and no branded-app surcharge.
Route planning on a map, a Lexile reading scale, MPIN login, hardware scan.	Routes and stops with live tracking and geofences; any reading level the school uses with an expected band per class; left out on purpose: MPIN, hardware scan, monthly deck, walk-in survey.

What to ask for in a demo

Take a fee at the counter and watch it reach the day book, the ledger and the parent's phone. Mark a register on a phone with the wifi off. Open the school as a trustee, a warden and a class teacher and see three different homes. Run a month of payroll. Pull the UDISE+ readiness count. Each takes under five minutes and each is something MyClassBoard does differently or not at all.
